Bachelor of Arts, Mathematics and Economics 2009

Working Papers

“Debt and Bargaining Outcomes: Evidence from U.S. Hospitals” (Job Market Paper)

- *Revise and Resubmit at Management Science*
- Washington University 11th Annual Corporate Finance PhD Poster Session Finalist for Best Paper Award in Honor of Professor Stuart I. Greenbaum
- 2015 Western Finance Association Cubist Systematic Strategies Ph.D. Candidate Award for Outstanding Research

This paper uses the health care industry as a novel laboratory in which to study a firm's strategic use of debt to enhance their bargaining power during negotiations with non-financial stakeholders. I show that reimbursement rates negotiated between a hospital and insurers for a specific procedure are higher when the hospital has more debt. I show that this effect is stronger when hospitals have less bargaining power relative to insurers ex ante. The contribution of this paper is to provide direct evidence that debt improves a firm's bargaining outcomes.

“Quasi-Insider Shareholder Activism: Corporate Governance at the Periphery of Control” joint with Jonathan Cohn and Aazam Virani

- Presented at 2018 AFA*, Arizona State University, Arizona Junior Finance Conference, University of New South Wales

We document the role of investors at the periphery of control within a firm – “quasi-insiders” - in shareholder activism. These agents, including founders and former executives, launch campaigns in smaller, worse-performing firms than traditional hedge fund activists, seek greater control, and employ more aggressive tactics. While they are less likely to achieve the stated objectives of their campaigns, these campaigns are associated with positive abnormal returns comparable to those in hedge fund campaigns and subsequent improvements in operating performance. Overall, our results suggest that quasi-insiders play an important and effective role as activists in firms that are less likely to be targeted by hedge funds.

“Evolution of Mutual Fund Voting: Consensus or Contentious?” joint with Audra Boone and Stu Gillan
- Presented at University of Arizona, FIRCG

The mutual fund industry has progressed towards one with larger funds and a greater proportion of passively managed assets. We examine how mutual fund voting behavior has evolved given these trends and the enhanced focus on governance since the financial crisis. We find that funds are increasingly likely to vote on agenda items as management recommends and less likely to vote as Institutional Shareholder Services (ISS) recommends. These results are stronger for large mutual fund families. Moreover, we find evidence suggesting that larger funds influence ISS recommendations and other fund's voting behavior.

“The Evolution of Healthcare and Corporate Finance”

I give a brief summary of the institutional details of the U.S. healthcare sector with a special emphasis on healthcare finance. In addition to its large size, U.S. healthcare has four unique features that can be used to help answer corporate finance questions: segmented markets, variation in corporate type, extensive data requirements and recent consolidation. I explain how changes over the last 100 years have led to each of these features. Next, I delve deeper into bargaining between insurance companies and hospitals, Medicare pricing, and hospital capital structure decisions during 2008-2012. Finally, I conclude with a brief discussion on how the Affordable Care Act has contributed to these factors.
